

CTO-R: Treatment of coronary chronic total occlusions (CTO) by percutaneous angioplasty (PCI): A single center registry

Daniel Weilenmann, Lucas Jörg, Michaela Gemperle, Doris Abbühl, Irene Schneider

The aim of the registry is to analyze clinical characteristics, angiographic and clinical follow-up of patients treated for a CTO by PCI. This will help to prove the clinical benefit for these patients. Furthermore we want to prove, that the MACE rate in this patient population with complex coronary anatomy is low.

type of project	clinical studies
status	ongoing - recruiting phase
start of project	2009
study design	single center clinical follow-up registry with a retrospective and prospective part.
responsible person	Dr. med. Daniel Weilenmann
