Treatment modalities of non-small cell lung cancer (NSCLC)

Treatment of non-small cell lung cancer (NSCLC) showed during the last few years major changes with a rather huge impact in clinical decision making. In early disease novel radio-oncological and surgical therapeutic modalities get more and more established whereas in locally advanced and recurrent or metastatic disease systemic treatments experience important paradigm shifts. In this article I want to offer you an overview and update in treatment in all stages of NSCLC.
